

# YOU COULD SAVE UP TO £300 ON YOUR FUEL BILL

1

## CHECK YOUR TARIFF

You might be able to save money with your current supplier by changing your energy tariff. Check a recent energy bill to find your tariff and energy usage.

You can find more information about tariffs at

<https://www.citizensadvice.org.uk/consumer/energy/energy-supply/get-a-better-energy-deal/choosing-energy-tariff/>

2

## SHOP AROUND

On a comparison site you can view the deals of different energy suppliers. Some sites will also help you to switch. Comparison sites usually work by commission from suppliers, but Ofgem accredits sites that follow a code of practice at <https://www.ofgem.gov.uk/consumers/household-gas-and-electricity-guide/how-switch-energy-supplier-and-shop-better-deal/compar-e-gas-and-electricity-tariffs-ofgem-accredited-price-comparison-sites>

3

## CONSIDER A COLLECTIVE SWITCH

Another option is to consider a collective switching scheme, such as Big Switch & Save. These schemes use the power of group buying to help you get a better deal. See

<https://www.bigswitchandsave.co.uk/>

4

## USE LESS ENERGY

The Energy Saving Trust has lots of useful tips for using less energy:
